Language

- English (B2)
- Serbian (Native)

Skills

- Monitoring:
Prometheus, Thanos,
Grafana,
Alertmanager,
OpenObserve,
OpenTelemetry,
Telegraf
- Infrastructure: Linux,
Incus/LXC, Ansible,
Gitea Actions
- Networking: MikroTik,
Arista, WireGuard
- Languages: Bash,
Python

Experience

System Administrator / DevOps Team - Del Systems

Cacak - Serbia

11.2024 - Present

Operate production infrastructure of 400+ servers (bare metal, Incus hosts, containers) and 30 network devices (MikroTik, Arista).

Designed and maintain Prometheus + Thanos HA cluster scraping 450+ targets for long-term metrics storage and global query view.

Built disaster recovery solution for Arista cold-standby switch pairs using Oxidized and SFTP.

Implemented multi-stream syslog pipeline (OpenTelemetry → OpenObserve) routing firewall, auth, and error logs with regex extraction.

Automated Prometheus and Alertmanager config deployment via Gitea Actions.

Participate in on-call rotation: incident response, alert triage, postmortems.

Maintain production services on Linux like Nginx and database clusters (ClickHouse, Aerospike, MariaDB, PostgreSQL)

Student Cultural Organization Manager

Cacak - Serbia

04.2024 - Present

Lead a team of 30 members in a student cultural and artistic society.

Responsible for organizing meetings, securing funding, recruiting new members, and driving the organization's growth and improvement.

Education

Faculty of Technical Sciences

Information technology

October 2021 - April 2026

Thesis: Data collection and early warning system in MikroTik network environments

High School "Nikola Tesla"

Computer technician

2017 - 2021
